

Computer Recycling

Microsoft
Partner Program

The philosophy behind the recycling service is to: -

- Optimise the reuse of equipment through the reclamation and re-sale of components.
- Minimise landfill occupancy by industrially processing all waste materials.
- Optimise the recycling of base materials by employing skilled and fully audited third parties to industrially process residual equipment.
- Continually evaluate the facilities and techniques on offer in the recycling sector, to offer our customers proven and auditable improvements and cost savings in waste material management.

WE MAKE IT SIMPLE

You can either call for a quotation over the phone or email us with information on the type of equipment you have.

We can offer a 12-month contract giving you the reassurance that all your redundant IT equipment will be disposed of environmentally; or just use our services as and when required. We don't have a 300 page terms and conditions contract!

Recycling Core Services

- Site Liaison
- Book Transport
- Arrange Collections
- Initial Sort and Audit
