

Virtual Private Network

More flexible networks

Virtual Private Networks (VPNs) allow organisations to connect branch offices or remote workers to the corporate network, cheaply and securely. Whether you want faster or cheaper site-to-site communications or the ability to access your applications from a laptop or PDA whilst out of the office, we provide complete VPN solutions that are fast, cost-effective and extremely secure. Originally conceived to deal with the problems of running applications over low bandwidth connections, thin client solutions offer a number of other benefits to organisations, particularly those with multiple offices or remote workers.

Services

Bronze Support

Silver Support

Remote Back-ups

Web Hosting

Wifi / Wireless Networks

VOIP

Hardware Sales

Link up your Head Office with branch offices securely

Centralise all applications

Allow Users to work remotely

Allow Engineers to take control of User PCs

The Benefits of using VPNs

By moving application software off PCs and onto thin client servers at a central site, the need to constantly upgrade or replace PCs is removed. At the same time, the burden of deploying, supporting and managing applications is also transferred from many PCs to the thin client servers - an enormous reduction in application-related workload. Software upgrades can be rolled out in hours rather than months, and new applications can be deployed within minutes to every user.
